Target version:	2.2		
origin:			

Description

Currently all servlet / jsp business including implementations is in com.zfabrik.servletjsp.

With the inception feature this has shown to be problematic, as we cannot split off the implementation easily.

Instead we should have modules:

com.zfabrik.webserver.jetty |
javax.servlet.jsp.jstl |
javax.servlet

History

#1 - 30.03.2013 12:11 - Henning Blohm

- Assignee deleted (Henning Blohm)

#2 - 05.04.2013 12:32 - Henning Blohm

And have com.zfabrik.servletjsp reference javax.servlet, javax.servlet.jsp.jstl.

#3 - 05.04.2013 12:33 - Henning Blohm

- Assignee set to Udo Offermann

#4 - 08.04.2013 10:35 - Udo Offermann

- Status changed from New to Rejected

The improvement has to be rejected because a webapp needs the url context factory which is part of the jetty's or tomcat's implementation. Thus a clear separation in javax.servlet and engine specific modules is not possible.
