

z2-Environment - Improvement #1622

Move cycle detection into ComponentResourceWrapper

08.12.2013 13:22 - Henning Blohm

Status:	Resolved	Start date:	
Priority:	Normal	Due date:

Target version:	2.3		
origin:			
Description			
Currently active dependency cycle detection is implemented in JavaComponentImpl. However, there has never been a case when our rather loose cycle policy has been needed and for better early fail (in this case) it may be more beneficial than limiting to move the cycle detection and load failing to the more generic ComponentResourceWrapper.
