## z2-Environment - Bug #1891

## SVNCR does not handle node-kind=="unknown" properly

26.03.2015 15:56 - Udo Offermann

**Description**

SVNCR's deltaScan iterates over all SVN log entries and checks their node-kind (dir, file, ...).
Changes are ignored in the case when

1. the changed node is a directory (i.e. a module w/o component from SVNCR's perspective)
2. SVN reports node-kind == "unknown"
