

z2-Environment - Bug #1928

ComponentFactoryBean may keep null instance as valid value

07.10.2015 13:34 - Henning Blohm

Description

If the load of the bean fails but the resource handle has successfully been retrieved, the component factory bean is in loaded state while no bean has been retrieved:

```
        if (this.rh == null) {
            if (logger.isLoggable(Level.FINE)) {
                logger.fine("Resolving Component Factory Bean: "+this);
            }
            if (this.componentName==null) {
                throw new IllegalArgumentException(
"Must specific componentName in Component Factory Bean");
            }
            this.getObjectType();
            this.rh = IComponentsLookup.INSTANCE.lookup(this.componentName, IResourceHandle.class);
        }
// ...
```
