

z2-Environment - Improvement #2079

Devise a method to reduce dependencies

18.08.2020 15:34 - Henning Blohm

Status:	New	Start date:	18.08.2020
Priority:	Normal	Due date:

Target version:	TBD		
origin:			
Description			
Reducing module dependencies to a minimum is a tricky task that is hardly ever looked at as it is cumbersome with little immediate merits.			
It would be good to have a way of knowing what dependencies were actually used at some point in time. E.g. via a classloading based tracking of effective dependencies and a JMX or web adm based display of these.
