

z2-Environment - Bug #2193

Log4j Configuration not effective once more....

15.04.2025 17:41 - Henning Blohm

Status:	Feedback	Start date:	15.04.2025
Priority:	High	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	2.10.2		
origin:			
Description As observed at TK: Due to a merge, the fix of #2166 got lost again. But there is more. As Log4j retrieves log contexts via walking up the class loader hierarchy (See <code>org.apache.logging.log4j.core.selector.ClassLoaderContextSelector.locateContext(ClassLoader, Entry<String, Object>, URI)</code>) using a weak reference value map, in order to make sure that our "system classloader" context is preserved we must make sure that it does not get collected. Acceptance Criteria <ul style="list-style-type: none">• The fix of #2166 is applied again• The log context configured is held onto.
