

z2-Environment - Bug #2199

Java component jars not unique across java components in module

14.07.2025 16:18 - Henning Blohm

Status:	New	Start date:	14.07.2025

Target version:	2.10.2		
origin:			
Description In the presence of mutliple java components in a module, compilation result jars (e.g. <module name>_api.jar) may be identical, as their name does not include the component suffix. This is no problem in z2 at runtime, as component runtime data is separated, but it is a problem when downloading jars using the Jar Resolver.			
Acceptance Criteria <ul style="list-style-type: none">• Compilation jars as produced by ComponentsBuilder have the component name as part of the jar file
