Target version:	3.0		
origin:			

Description

With HHH-15322:https://hibernate.atlassian.net/browse/HHH-15322 and
HHH-15033:https://hibernate.atlassian.net/browse/HHH-15033 Hibernate restriced data source lookups to JNDI names starting with
java: and osgi: (for now particular reason really). This breaks our data source support for shared domain modules and we should
simply support osgi as an alias to components.

Acceptance Criteria

- "osgi:" is an alias to "components:" in z2 JNDI support
