

z2-Environment - Feature #894

Component Repositories to provide on module level not component level

08.09.2012 10:42 - Henning Blohm

Description

Currently the dev repo is the only repository implementation that actively hides modules of repos of lower prio, rather than just covering up components.

That should be the default behavior however. In particular it would allow to have system definitions where

```
core --(sys repo) --> base
core --(app repo) --> app
```

and the app repo actually defines the environment. So that base is runnable albeit very basic and by adding another, higher prio app repo, the scenario can be easily added on top
