

z2-Environment - Bug #922

Eclipsoid component is not started when some other web app fails

28.09.2012 16:14 - Udo Offermann

Status:	Closed	Start date:	28.09.2012
Priority:	Urgent	Due date:	
Assignee:	Henning Blohm	% Done:	100%
Category:	z2-core	Estimated time:	0.00 hour
Target version:	2.2		
origin:			
Description			
Steps to reproduce:			
Create new z2 web project using the Eclipsoid wizard and arm it. It will create a new project with an "invalid" webapp.path property inside web/z.properties Leave the invalid webapp.path value and start the server. Starting the new web app will fail because of the invalid context name. However Eclipsoid isn't started as well!			

History

- Priority changed from High to Urgent

#2 - 02.01.2013 12:21 - Henning Blohm

More specifically:

When adding a component as dependency to a worker target state and that component fails, any other participation to that state will not be followed.

Root cause is that the core-level dependency preparation already fails and so the prepare step of the state component itself will not be run.

#3 - 02.01.2013 12:21 - Henning Blohm

- Status changed from New to In Progress

#4 - 03.01.2013 15:38 - Henning Blohm

#5 - 03.01.2013 17:59 - Henning Blohm

- Status changed from Resolved to In Progress

re-opening. dependency handling is not clean when done generically on component level as:

- there is too many query activities when looking for generic participation,
- there is a lot of semantics creeping into component resource wrapper, in particular about IDependencyComponent

#6 - 03.01.2013 18:29 - Henning Blohm
